

NanoSure
Tattoo Removal Technology

Tattoo Regret?

3D-NanoSure offers an affordable solution for the removal of unwanted tattoos across a wide spectrum of ink colours.

Unwanted dark and multi coloured tattoos can be safely and effectively eliminated using our advanced 3D-NanoSure dual wavelength laser with Q-switching application.

Why 3D-NanoSure?

The technology used for tattoo removal procedures is called 'Q-switching'. It is production of a specific type of quick, powerful pulse that shatters tattoo ink without harming surrounding tissue. All other types of aesthetic lasers will not safely and effectively remove tattoos - Q-switched lasers are the only proven method for removing tattoos safely and without scarring.

Benefits of treatment

- ✓ **Affordable Treatments**
- ✓ **Minimal Pain**
- ✓ **No Downtime**
- ✓ **Fast Results**

Our 3D-NanoSure treatment offers a diversity of new treatments in addition to tattoo removal;

- Pigmentation Removal
- Skin Lightening / Rebalancing Skin tone
- Benign Pigmented Lesion Removal
- Melasma
- Carbon Laser Peel

3D-Nanosure Explained

3D-NanoSure offers both the gold standard in dual wavelength Q-switched Nd: YAG technology for the effective removal of tattoos, whilst boasting the very highest treatment specification. This, combined with the one of the most affordable prices available on the market today ensures 3D-NanoSure is the preferred choice for advanced tattoo removal.

FAQ's

Is 3D-nanosure Safe?

3D-nanosure uses proven Q-switch technology ensuring fantastic results, with minimal downtime and pain. The treatment is safe, effective and is performed in a fast treatment time.

As with all lasers, you will be instructed to wear protective eye wear during treatment, and all laser safety protocols will be adhered to in order to comply with safe practice.

What Will I experience during treatment?

During treatment, you may experience a warm sensation or slight heat under the skin, in addition, you may feel slight discomfort during the treatment application. The probe used to treat the area, will be held on a small area of the skin, whilst the laser works to remove the tattoo, and then it will be moved to the next area and so on. Whilst the area is being treated, you may also hear a minor popping noise. You will notice the treated area turning white in colour, this is the result of the skin reacting to the heat from the laser, however this will reduce in appearance up to 24 hours post treatment

Who is a good candidate for the 3D-nanosure Treatment?

3D-nanosure removes 95% of tattoos, across a wide spectrum of ink colours. It is the ideal treatment for any candidate looking to remove an unwanted tattoo using the latest result driven Q-switch technology at an affordable price.

What areas can be treated?

This treatment can target many areas externally on the body where there is an unwanted tattoo. Many different sizes of tattoo can be treated to target a wide spectrum of ink colours.

How many treatments are required?

Typically 3-5 sessions are recommended to achieve desired results.

How long does treatment take?

Treatment time will vary, depending on the size of the tattoo being treated, however this will be advised by your specialist during your thorough consultation process. On average, for example, a 3 inch by 3inch tattoo would take approximately 10-15minutes.

How long until I see results?

Visible results can be seen after your first session, however these will improve throughout the course of treatments to achieve the desired outcome.

What results can be expected?

By using Q-switch technology, this shatters the ink into small particles, which the body then breaks down and takes it through the lymphatic system. As a result, the tattoo fades and you are left with no scarring and minimal downtime.

Is there any downtime of after care required?

Initially following treatment, the area will swell slightly, and white dots will appear on the area treated. This is a result of the skin reacting to the heat, however this will reduce within 24 hours post treatment. You may also experience some slight redness of the skin,

After care advice will be provided following your treatment, typically, we advise to keep the area dry and covered for 3 days post treatment, in addition to applying 3D-professional solutions youth serum which is fantastic for aiding the healing process. This is to be applied as directed by your professional.
